

Downloading Observations onto iNaturalist from your computer

1. Put the memory card from your camera in the computer.
2. Get a free account on iNaturalist (iNaturalist.org) and log in.
3. Click upload from the menu bar or Add observation button from the home page

4. Drag and drop photos from your memory card folder or computer. You can drag and drop multiple photos for more than one record. If you have multiple photos (i.e. different angles of the same plant) for one record you must add the other photos after saving by clicking edit for the submission you want to add more photos to.

5. Fill in date, location, pick a project to enter it into (unless these automatically fill in from photo metadata) and add any notes needed. If it is cultivated check that box.

Editing 1 observation:

Details

 American Beaver 

 2-17-2013

 KVI Beach, Washington 986

Description

Location is public

Captive / cultivated
