

# Wildfire Smoke Safety Plan

IslandWood measures AQI levels using our on campus monitors.  
Caregivers will be updated via email if levels exceed 100.

Good: 0-50

No action

Moderate: 51-100

- Increased monitoring of campers with known sensitivities

Unhealthy for  
Sensitive Groups:  
101- 150

- Reduce activity level and increase water and rest breaks
- Campers with known sensitives and those who are experiencing symptoms will be moved to rooms with air purifiers

Unhealthy:  
151-200

- All campers will be moved indoors
- Caregivers can pick up campers early if desired

Very Unhealthy:  
>200

- Caregivers will be notified that camp is ending early and will be asked to pick up campers as soon as possible
